

Get your car protected with our
PENETRATIVE COATING

01

Extreme Protection, Ultimate Performance.

Experience this **Penetrative Coating** technology that's designed to form a protective layer on your car's paintwork.

We get it. You want your car to look good all the time and are open to trying anything that's effective. Carefully wash your car on a regular basis and monthly waxing. But despite your effort, scratches, swirl marks, dirt and stains cling to your car's paint.

G Guard Penetrative Coating exist to change this narrative.

The main idea of **Penetrative Coating** is to give your vehicle a protective layer which protects the original paint, while giving a glossy and shiny finish. It helps to keep your car looking like-new with comparatively minimal maintenance. Your vehicle's outlook is protected as long as 3-10 years, depending on the package that you opt for.

WHAT WE PROMISE

COATING PROPERTIES

05

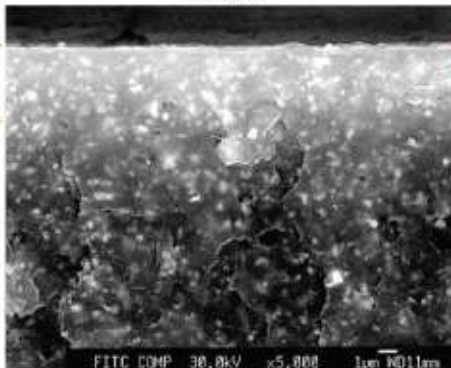

Durable & Deeply Effective.

Our unique **Penetrative & Multi-layered** nano ceramic coating bonds deeper into the paint, making it much more durable than non-penetrative coating from elsewhere.

ANTI-OXIDATION BENEFIT

Penetrative Coating, More Than A Simple Coating.

06
...

G Guard Penetrative Coating is formulated with stable, **anti-oxidation** material to guard your car paint from yellowing and rusting.

Metal plate after being soaked in 10% saline solution for 1 hour. Results show that G Guard ceramic coating **provides best protection from oxidation**, compared to other brands.

G Guard ceramic coating in the form of transparent silica-offering clarity while protecting your car, with **no sign of yellowing and murkiness.**

07

Multiple uses
in various areas.

The Modern Solution For Protecting Surfaces.

Our **reliability** is also demonstrated via its effectiveness and durability on heavy-duty vehicles operating under harsh conditions, such as watercraft, railway vehicle, construction equipment and agricultural machinery.

08

Trusted By The Best.

**9H Coating Hardness,
Tested By TÜV NORD.**

Most optimum in accommodating
the car's lacquer.

Our coating tools and materials are imported from **JAPAN**. To ensure the best, quality products meet the finest workmanship, our technicians are trained and certified by our Japanese Principal every year.

GREATER COATING PERFORMANCE

09

Our Ultimate Technologies.

Latest innovations in the car's surface protection industry have come with great technology.

Spray Application Technology

Compared to manual or hand application, our **spray method** allows extremely fine particles of the coating material to be applied evenly and thoroughly into the car paint. This will ensure a perfect bonding as well.

Perfection In Coating

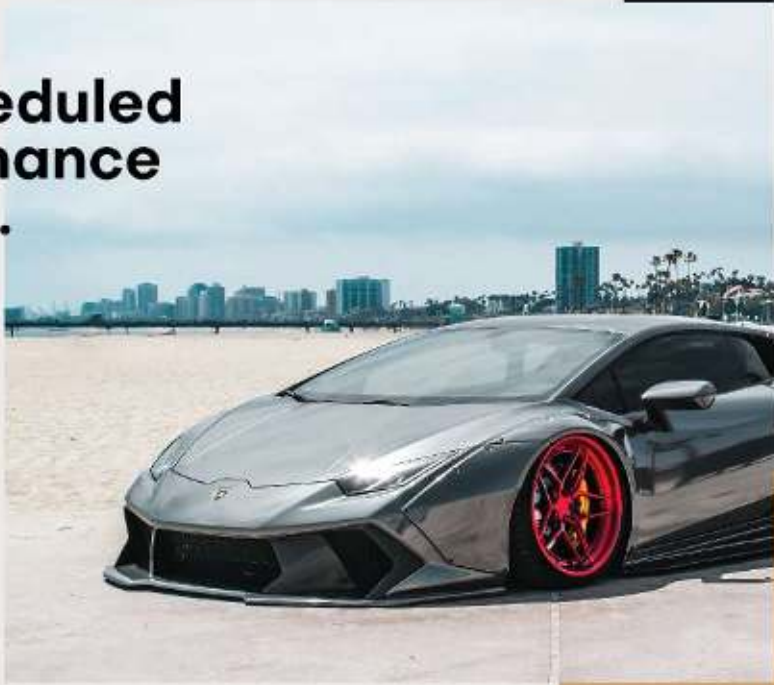

We employ the **coating oven** that performs penetrative infrared heating to ensure effective curing and hardening of coating, preventing formation of skin and blisters.

COMBINATION OF
AESTHETICS
AND PROTECTION

No Scheduled Maintenance Needed.

But when do you need an all-around service?

While the ceramic coating will remain on the painted surface and offer protection to the paint, other impurities and contaminations like bird droppings, insects, tree sap, industrial pollutions, detergent residue, etc. will collect on top of the coating surface.

In those instances, your speed in removing this contamination and keeping the painted surface dry and clean will determine the extend of the damage done to your paint.

An all-round service can help you keep your car in excellent condition, we will remove all the impurities, swirls and scratches to return the finish to its original gloss.

10

SINCE 2008

We have pioneered in the field of nanotech coatings and automotive detailing industry.

DELIVERING THE QUALITY WE PROMISE

We Are Certified By TÜV NORD.

G Guard is dedicated to developing high-quality, durable and reliable products. Our products undergo extensive testing to ensure that they meet the industry standard and requirements. They are tested in accordance with the **TÜV NORD** certification standard.
